

OMR (Omraie Intervention Model):

A Novel Integrative Approach in Coaching and Psychological Transformation

Prof. Reza Omraie

Founder of NLP Coaching in Iran

Independent Researcher in NLP, Coaching, and Transformational Psychology

Abstract

The increasing complexity of human behavioral, emotional, and organizational challenges has highlighted the need for integrative models capable of producing sustainable transformation. Many existing coaching and psychological approaches focus primarily on cognition or behavior while paying limited attention to the deeper structures of awareness, values, beliefs, and identity formation.

The **Omraie Intervention Model (OMR)** is introduced as a multidimensional transformational framework centered on three fundamental processes:

1. **Observe** – developing awareness and conscious observation,
2. **Match** – aligning beliefs, values, and internal structures,
3. **Raise** – elevating identity, behavior, and transformational performance.

The model proposes that sustainable behavioral change occurs when individuals first expand awareness, then reorganize limiting beliefs and value systems, and finally stabilize the new awareness within behavioral identity structures. OMR emphasizes that transformation is not complete until the individual develops an emotional sense of belonging and congruence with the new behavior and identity.

Integrating principles from Neuro-Linguistic Programming (NLP), transformational coaching, cognitive restructuring, identity-level intervention, and systems thinking, the OMR framework offers a practical and psychologically integrative pathway for leadership development, personal transformation, and behavioral change.

This paper presents the theoretical foundations, transformational mechanisms, and applied structure of the OMR Model and proposes future directions for empirical research and professional application.

Keywords

OMR Model, Omraie Intervention Model, Behavioral Identity, NLP Coaching, Psychological Transformation, Awareness Change, Belief Change, Values Alignment, Identity Transformation, Integrative Coaching

1. Introduction

Human behavior is not driven solely by external actions or conscious decisions. Behavioral patterns are deeply connected to awareness structures, belief systems, emotional conditioning, personal values, and identity perception.

Traditional coaching and psychological approaches often attempt to modify behavior directly without addressing the deeper layers that generate and sustain those behaviors. As a result, many behavioral changes remain temporary and unstable.

The **Omraie Intervention Model (OMR)** was developed as an integrative transformational framework designed to create sustainable change through a progressive three-stage process:

- **Observe** → Awareness Expansion
- **Match** → Alignment of Beliefs and Values
- **Raise** → Identity Elevation and Behavioral Stabilization

The model suggests that long-term transformation occurs when awareness evolves into identity, and when new behaviors become psychologically meaningful and emotionally embodied.

2. Core Philosophy of the OMR Model

The OMR Model is based on the principle that:

“Sustainable behavioral change occurs when awareness, beliefs, values, and identity become aligned within an integrated transformational process.”

The model emphasizes that behavior alone cannot create transformation. Instead, lasting change requires movement through deeper psychological layers:

1. Awareness
2. Beliefs
3. Values
4. Identity
5. Behavioral embodiment

The OMR framework therefore approaches transformation as both a cognitive and existential process.

3. The Three Core Dimensions of OMR

3.1 OBSERVE — Awareness Creation

The first stage of the OMR Model focuses on conscious observation and awareness expansion.

At this level, individuals learn to:

- observe internal dialogue,
- recognize unconscious behavioral patterns,
- identify emotional triggers,
- increase self-awareness,
- and understand environmental influences.

The purpose of this stage is to move individuals from automatic and unconscious reactions toward conscious perception and reflective awareness.

OMR considers awareness to be the foundation of all transformation because unconscious patterns cannot be changed until they are observed.

Key Outcomes of Observe

- Expanded perception
 - Pattern recognition
 - Increased self-awareness
 - Conscious observation
 - Emotional insight
-

3.2 MATCH — Beliefs and Values Alignment

After awareness is created, the second stage focuses on restructuring internal meaning systems.

At this level, OMR works on:

- changing limiting beliefs,
- reorganizing internal representations,
- aligning personal values,

- resolving internal conflicts,
- and creating congruence between goals and identity.

The model proposes that many behavioral problems emerge from conflicts between:

- conscious goals,
- unconscious beliefs,
- and personal value systems.

Transformation becomes possible when beliefs and values are realigned in a psychologically coherent structure.

Key Outcomes of Match

- Belief transformation
- Values clarification
- Internal congruence
- Emotional alignment
- Cognitive restructuring

3.3 RAISE — Identity Elevation and Behavioral Stabilization

The third stage represents the elevation and stabilization of the transformed self.

At this level:

- new awareness becomes integrated into identity,
- behaviors become emotionally meaningful,
- and individuals develop a sense of belonging to the new version of themselves.

OMR emphasizes that behavioral change becomes sustainable only when the person emotionally identifies with the new behavior.

The goal is not temporary behavioral control, but the creation of a stable transformational identity.

This stage includes:

- behavioral embodiment,
- identity reinforcement,
- emotional ownership,

- and sustainable performance elevation.

Key Outcomes of Raise

- Identity stabilization
 - Behavioral consistency
 - Emotional ownership
 - Long-term transformation
 - Authentic self-expression
-

4. The OMR Transformation Process

The transformational pathway in OMR can be summarized as:

Awareness → Belief Shift → Values Alignment → Identity Formation → Behavioral Integration

The model proposes that:

- awareness initiates transformation,
- beliefs direct interpretation,
- values organize motivation,
- identity stabilizes change,
- and behavior expresses the transformed self.

This sequence creates a self-reinforcing cycle of personal evolution and conscious behavioral development.

5. Theoretical Foundations

The OMR Model integrates concepts from multiple disciplines:

Neuro-Linguistic Programming (NLP)

- Reframing
- Anchoring
- State management
- Submodalities
- Language patterns

Transformational Coaching

- Goal alignment
- Empowerment
- Self-awareness
- Purpose-driven development

Cognitive Psychology

- Belief systems
- Cognitive restructuring
- Meaning-making processes

Identity-Based Transformation

- Self-concept development
- Identity congruence
- Behavioral embodiment

Systems Thinking

- Human interaction systems
- Environmental influence
- Relational dynamics

6. Applications of the OMR Model

The OMR framework may be applied in:

Leadership Development

- Transformational leadership
- Communication mastery
- Emotional intelligence

Coaching and Personal Development

- Self-confidence
- Motivation
- Emotional resilience

- Behavioral change

Organizational Transformation

- Team alignment
- Cultural development
- Adaptive performance

Psychological Growth

- Identity reconstruction
- Personal empowerment
- Conscious living

7. Discussion

The distinguishing characteristic of the OMR Model is its emphasis on identity stabilization as the final stage of transformation.

Many intervention approaches focus primarily on changing thoughts or behaviors. OMR proposes that transformation remains incomplete unless the individual develops:

- emotional attachment to the new identity,
- psychological ownership of the new behavior,
- and congruence between awareness, values, and action.

The model therefore positions identity embodiment as the central mechanism of sustainable transformation.

8. Conclusion

The OMR (Omraie Intervention Model) offers an integrative framework for behavioral and psychological transformation centered on three core dimensions:

- Observe
- Match
- Raise

By guiding individuals through awareness expansion, belief and values alignment, and identity stabilization, the model seeks to create sustainable and meaningful behavioral transformation.

The OMR framework contributes a multidimensional perspective to modern coaching and transformational psychology and provides a foundation for future scientific research, leadership development, and applied intervention systems.

Proposed Conceptual Formula of OMR

Transformation=(Awareness+Belief Shift+Values Alignment)→Identity Stabilization
Transformation=(Awareness+Belief Shift+Values Alignment)→Identity Stabilization
